SGET 700: Tools for the Development of Instruction
Buddy Check #3: Proofreading

Name of Reviewer: _____Rebecca Baucom_____

Name of Site Author: _____Dipal Patel_____

1. Review the site's page titles. Does the site use two part page titles? Are the titles in Standard English form (complete words, spaces between words, etc.) Is the first part of the title the same on all pages? Is the second part unique to each page, and does it adequately identify the page? Is the capitalization, punctuation, and spacing of titles consistent? Below, list the page names of pages with titles that need correction.

   Throughout the site, there is a main header that stays static, while page titles change. They are all in Standard English, and each page has a unique header specific to that page. The titles are appropriately titled, capitalized, etc.

2. Check the site's links. Are all links functioning? Do all graphic links include appropriate alternative text? Do all graphic links include a nearby text link that links to the same resource? List the page, link, and problem of any link that needs to be edited.

   Animal Definition- Vertebrates and Invertebrates links produce a 404 error.

   Project Two Kingdom of Plantae- clicking on graphic produces a 404 error

   Many graphics in first two Kingdoms seem clickable, but like above, bring you to a 404 Bluehost error page.

3. Check the graphics included in this site. Do they all load correctly? Do they all included appropriate alternative text in Standard English convention? List the page, graphic name, and problem of any graphic needing correction.

   Graphics all loaded correctly, but do not seem to include alt text. Most graphics are actual clickable links.

4. Review the documentation on every page of this site. Each page must include the name of the author, the date of last update, an email link, and an appropriate disclaimer. Please list the name of each page with a documentation error and specify the type of error.

   All pages include the name, date, and email link. There is no disclaimer.

5. Check for general text edits. When developing such a large project, it is easy to make a few spelling, grammatical, or capitalization errors. Help your buddy by identifying any such errors. Remember to include the page name and

provide specifics to help them find and correct the error. Also identify any passages which you find at all confusing because of wording.

I did not find any text errors.

6. Overall site comments. Include any overall suggestions for the site and any suggestions for future development.

I found this page to be very visually appealing and easy to navigate. There were images, links and a very nice flow from one lesson to the next without a lot of searching and/or clicking around. It was age-appropriate, written concisely and I felt like I actually learned some science today!
